Joaquín Noguera Velázquez

Senior Backend Developer (Node.js / NestJS)

Senior backend developer with 10+ years programming and 6+ years of professional experience, working with US-based teams. I design and operate payment and event systems with NestJS, Node.js/TypeScript, PostgreSQL, MongoDB and Redis, focused on performance and production reliability — for example, cutting heavy query times from 20+ seconds to sub-second with Redis. Comfortable across the stack, from Angular to Salesforce and Azure integrations.

Experience

Software Developer (Backend)

Blackthorn.io

Apr 2022 — Nov 2026 United States (Remote)

- Migrated 48 Salesforce classes (events, tickets, and system data) to external database storage, bypassing governor limits and improving scalability without compromising security policies
- Implemented Redis caching with dynamic TTLs across non-payment endpoints, reducing heavy list query latency from 20+ seconds to sub-second
- Built purchase-funnel analytics with Google Tag Manager to track drop-off and event engagement, enabling data-driven product decisions
- Co-developed NestJS microservices in a 10+ repository architecture, improving service isolation and independent deployability
- Provided cross-functional leadership through developer mentoring, QA collaboration, and Tier-3 production escalation support
- Participated in on-call rotation and resolved critical payment incidents under high-pressure production conditions

Salesforce & Azure Integration Developer

Folder IT

Mar 2021 — Apr 2022 Santa Fe, Argentina

- Built 40+ enterprise integration flows on Azure (Logic Apps, Function Apps, Service Bus, Data Factory, Data Lake), connecting Salesforce with Dynamics 365 and other systems, with end-to-end monitoring via Serverless360
- Provided Salesforce CPQ support in client production systems: fixed long-standing bugs and monitored trigger handlers, batch jobs and schedulable processes to keep operations stable

Full Stack Developer

Digital Lab

Sep 2020 — Feb 2021 Esperanza, Santa Fe, Argentina

- Built a full-stack graphic resources platform from scratch with an Angular 9 frontend and a Node.js/Express REST API, turning Adobe XD mockups into production-ready interfaces (Bootstrap, Angular Material)
- Identified and proposed architectural improvements to key portions of the codebase

Education

Informatics Engineering (partial coursework)

Universidad Nacional del Litoral

2017 — 2019

Computer Technician

Technical Education School No. 3 — Lt. Don Luis C. Candelaria

2010 — 2016

Technical Skills

BACKEND

`Node.js` `NestJS` `TypeScript` `Express` `REST APIs` `Microservices` `Redis` `Payment Gateways` `Testing (Jest)`

FRONTEND

`Angular` `JavaScript` `HTML5` `CSS3`

CLOUD & DEVOPS

`Azure` `Salesforce` `Docker` `Kubernetes` `Git` `CI/CD`

DATABASES

`PostgreSQL` `MongoDB` `SQL`
