Joaquín Noguera Velázquez

Senior Backend Software Developer

Senior backend developer with 10+ years in programming and 6+ years in professional software delivery. I build and operate payment and event systems with NestJS, Node.js/TypeScript, PostgreSQL, MongoDB, and Redis, with strong ownership of APIs, data modeling, performance, and production reliability. Key outcomes include migrating 48 Salesforce classes to external storage, cutting heavy query latency from 20+ seconds to sub-second with Redis, and co-building microservices across a 10+ repository architecture. I also mentor developers, partner with QA and product, handle Tier-3 incidents, and support on-call operations for payment-critical flows.

Experience

Software Developer (Backend)

Blackthorn.io

Apr 2022 — Present United States (Remote)

- Migrated 48 Salesforce classes (events, tickets, and system data) to external database storage, bypassing governor limits and improving scalability without compromising security policies
- Implemented Redis caching with dynamic TTLs across non-payment endpoints, reducing heavy list query latency from 20+ seconds to sub-second
- Built purchase-funnel analytics with Google Tag Manager to track drop-off and event engagement, enabling data-driven product decisions
- Co-developed NestJS microservices in a 10+ repository architecture, improving service isolation and independent deployability
- Provided cross-functional leadership through developer mentoring, QA collaboration, and Tier-3 production escalation support
- Participated in on-call rotation and resolved critical payment incidents under high-pressure production conditions

Salesforce Developer

Folder IT

Aug 2021 — Apr 2022 Santa Fe, Argentina

- Provided CPQ support and maintenance for active client production systems on the Salesforce platform
- Resolved long-standing bugs in client Salesforce applications, improving system reliability for end users
- Monitored and reviewed trigger handlers, batch jobs, and schedulable processes to ensure operational stability

Azure Integration Developer

Folder IT

Mar 2021 — Jul 2021 Santa Fe, Argentina

- Built 40+ enterprise integration flows using Azure Logic Apps, Function Apps, Service Bus, Data Factory, and Data Lake
- Connected Salesforce with Microsoft Dynamics 365 and other enterprise systems for seamless data exchange
- Implemented end-to-end monitoring via Serverless360 with Business Activity Monitoring, providing full visibility into integration health

Education

Informatics

Universidad Nacional del Litoral
2017 — 2019

Computer Technician

Technical Education School No. 3 — Lt. Don Luis C. Candelaria
2010 — 2016

Technical Skills

BACKEND

Node.js · NestJS · Express · REST APIs · Microservices · Redis

FRONTEND

Angular · TypeScript · JavaScript · HTML5 · CSS3

CLOUD & DEVOPS

Azure · Salesforce · Docker · Git · CI/CD

DATABASES

PostgreSQL · MongoDB · SQL

Languages

Spanish	Native / Bilingual
English	Professional Working

Full Stack Developer

Digital Lab

Sep 2020 — Feb 2021 Esperanza, Santa Fe, Argentina

- Built a full-stack graphic resources platform from scratch using Angular 9 frontend and Node.js/Express RESTful API
- Translated Adobe XD mockups into production-ready interfaces using Bootstrap and Angular Material
- Identified and proposed architectural improvements to key portions of the codebase
